

Dragon Medical One

Professional speech recognition for the healthcare industry.
Available in the cloud – versatile and powerful.

Dragon Medical One is a cloud-based, professional medical speech recognition solution. Thanks to its artificial intelligence and the included extensive specialist vocabulary, Dragon Medical One offers maximum recognition accuracy, both for medical and general texts. Doctors dictate their texts directly where they belong, for example into the practice or hospital information system, which saves time, shortens processing times and reduces demands on staff.

Unique benefits

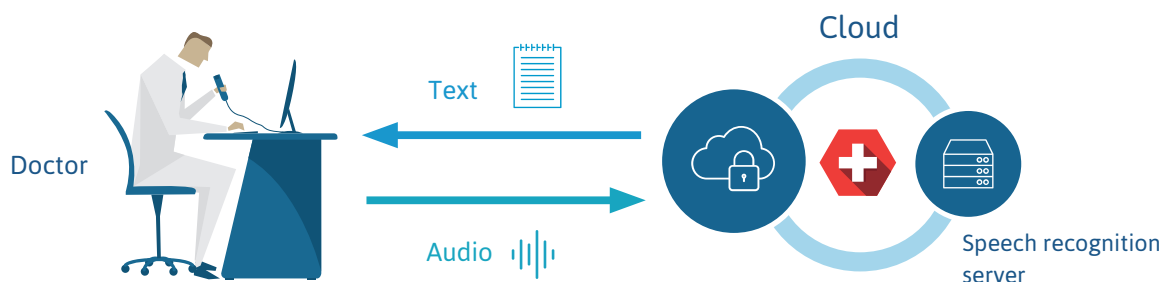

- Efficient voice-controlled data entry into practice / hospital information systems and various Windows applications.
- Workflow flexibility due to foreground and background speech recognition, connected to a Voicepoint dictation management software solution.
- Increased efficiency thanks to specialist medical speech models, user-defined vocabularies and text modules.
- Higher quality, more detailed reports in less time.
- Secure data connection to the Voicepoint Cloud, located in Switzerland.
- Solution is available from any workstation, regardless of location, enabling doctors to concentrate on treating and caring for patients.
- Medical speech processing is available and secure throughout the entire organisation.
- Exceptional accuracy, including accent detection.
- Quick and easy installation on all essential workstations.
- Dragon Medical One is available in German, French, Italian and English.
- Increased level of protection through our ISO 27001 certification for information security.

Quick to install, easy to use

Clients connect to the Dragon Medical server which is installed in the secure and highly-available Voicepoint Cloud. Dragon Medical One can be used on all devices of a Windows-based infrastructure, including virtualised clients and selected Linux-based thin clients. The solution is managed centrally in the Voicepoint Cloud and is available to use everywhere as foreground or background speech recognition, regardless of which practice or hospital information system is used. This means that Dragon Medical One offers medical practices, hospitals, psychiatric clinics, rehabilitation and specialist clinics, a simple and flexible medical speech recognition solution with maximum availability and security. We also recommend the use of a Voicepoint specialist medical vocabulary to ensure a high level of recognition accuracy from the very start.

Focus on the patient

The application is available to use without any restrictions at any workstations, allowing doctors to concentrate on treating and caring for patients.

Speed, precision and adaptability

Benefit from fast and responsive speech recognition that provides maximum precision from the very beginning.

Set up complex processes

Sparen Sie wertvolle Zeit durch die Erstellung von Sprachbefehlen, mit welchen Sie zahlreiche Aktionen automatisieren können. Mit einer ergänzenden Diktatverwaltungssoftware von Voicepoint können Sie ausserdem diverse, auf Ihre Umgebung angepasste Workflows abbilden.

Advanced microphone options

Enjoy more flexibility by assigning commands and actions to the buttons on your dictation microphone.

Simplified installation and administration

Simple configuration, quick installation and updates: Everything is designed to make the work of your IT department and staff easier and to ensure fast implementation.

Unlimited productivity

Speak freely and as much as you want without worrying about potential usage restrictions. You will stay productive at all times and be able to concentrate on your relevant activities.

256-bit encryption

Die Verbindung wird mit einer Serverkomponente mit 256-Bit-Verschlüsselung hergestellt, damit bleiben alle Daten während der Übertragung, als auch auf dem Server verschlüsselt.

Support in virtual environment

Dragon Medical One offers support for thin client hardware, server virtualisation and Citrix environments. This allows the speech recognition solution to be integrated into existing IT environments quickly and seamlessly. Please contact us for more information on supported virtualisations.

Technical data

Supported operating systems:

Windows 10, Windows 11
Microsoft .NET Framework 4.7.2

Supported hardware:

Philips SpeechMike, Nuance PowerMic and selected headsets and microphone
