VOICEPOINT
CONFIG MANAGER

Voicepoint Configuration Manager

Productivity Tool for Winscribe

Centralisation of Winscribe configuration

Available as a supplement to Winscribe, this software allows Winscribe client components to be configured centrally using a web application. User-specific settings are stored in a profile on the server and applied regardless of the user's location. Configurations include option settings in the software (incl. configuration of speech recognition options) and key settings for foot switches and stationary dictation devices. Configuration profiles can be selectively assigned to individual users or departments as well as to the entire organisation.

Technical information

Supported devices

- Olympus:
  - Foot switches RS-28 and RS-31
  - Stationary dictation devices RecMic

- Philips:
  - Foot switches 2310 and 2330
  - Stationary dictation devices SpeechMike Air, Classic, Pro and Premium

- Infinity foot switch

System requirements

- Winscribe 4.2 oder Winscribe 5.0

- Server operating system:
  - Windows Server 2016
  - Windows Server 2019

- .NET Framework 4.6

Centralised configuration of software settings

Author and client applications do not need to be configured on every single workstation. Instead, they are configured centrally using a web interface.

Centralised configuration of hardware

Configuration Manager enables users to centrally configure foot switches and stationary dictation devices. Configurations can be assigned to users, device types or individual devices.

Provision of settings

User-specific settings are stored in a configuration profile on the server. These can then be applied at any time and regardless of the user's location.

Summaries in profiles

Configurations can be summarised in profiles and selectively assigned to individual users, departments or entire organisations.
